The Wright Lift

Caravan

Cessna 172

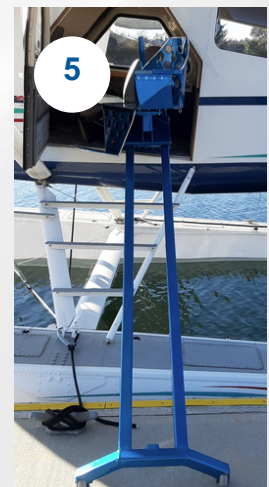

The Wright Lift(TM) is specially designed for use on small fixed wing aircraft like Cessnas and Private Jets as well as helicopters and float planes. Length and rise are customized for the aircraft, and the lift can be made to be portable or welded.

Private Jet

Amphib from hangar

Beaver

The Wright Lift

Manufactured in Canada with high quality 6061 Aluminium framing and powder coated for a long lasting protective finish.

The chair swivels and locks into position for loading, lifting, lowering and unloading. At the top, the chair is capable of a 360 degree swivel and can lock into multiple positions.

Lifting time – approximately 30 seconds

Lowering Time – approximately 20 seconds

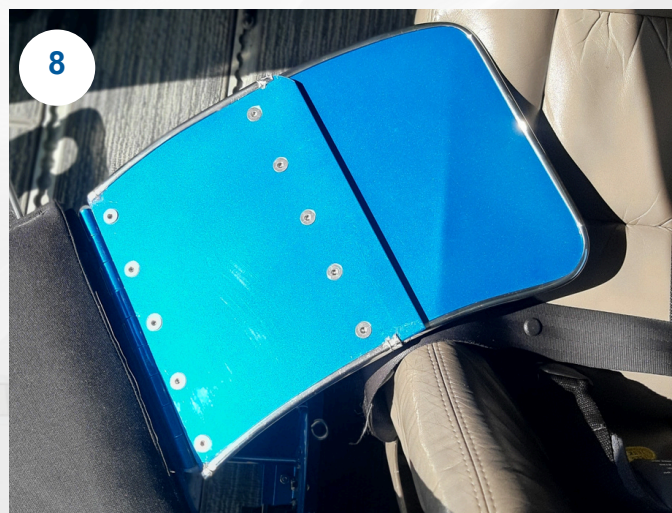

Rechargeable battery

Engineer certified for up to 350 lbs

Custom colours, length and rise configurations available

The Wright Lift

The Wright Lift is designed to be easily transported across tarmacs and float plane docks to accomodate the various boarding and deplaning zones of the aircrafts.

Weather safe lift cover for floatplane dock

The standard welded version of the lift can be stored in a weather safe cover, while the version that can be disassembled fits neatly into a standard golf travel bag

Disassembled, portable lift stored in golf bag

The Aisle Chair

12

13

14

Designed specially for Learjet, The Aisle Chair is a compact unit, made for tight storage spaces, and narrow aisles found on small and medium jet aircrafts.

15

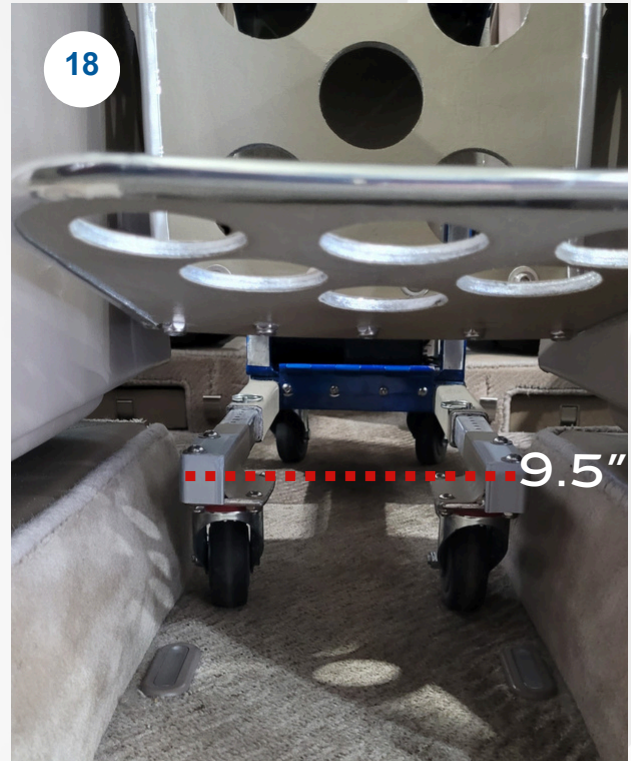

16

Caster wheels are used in this application to allow the unit to navigate through the tight corners and turns

The Aisle Chair

The Aisle Chair is 13" wide at the seat, and only 9.5" wide at the base. The caster wheels allow the operator to find the correct angle to position the chair and can adjust the height to be level with the aircraft seat to ensure a smooth transfer.

Rechargeable battery

Engineer certified for up to 350 lbs

Custom colours, length and rise configurations available

The Handler

The Handler(TM) is a safer and easier way to lift and transfer people and passengers in and out of limiting environments.

Made in Canada with durable high quality webbing and fabrics that are washable and water resistant.

Multiple lift handles allow 2-4 people to lift users in the Handler with relative ease. Available in a variety of colours and 2 sizes (Youth and Adult).

The Chair Lift

24

The Wright Chair (TM) is designed for multiple purposes. Assisting those with disability or mobility challenges to get into and out of vehicles of all types, helicopters, or for use in-home.

The chair sides fold down to allow the user to slide into, or out of the chair easily. The seat swivels and locks into multiple positions for stability while lifting, moving into or out of the chair.

25

Lifting time –
approximately 15 seconds

Lowering Time –
approximately 10 seconds

Rechargeable battery

Engineer certified for up to
350 lbs

Custom colours, length and
rise configurations available

26

41" H x 13"W x 24" long (9" high when folded)

Stretcher Attachment

Specially designed for passengers who require medical care, and a safe and secure transfer to or from an aircraft. The Stretcher Attachment is made to fit the Wright Lift, and is secured in place on the seat mount with safety pins.

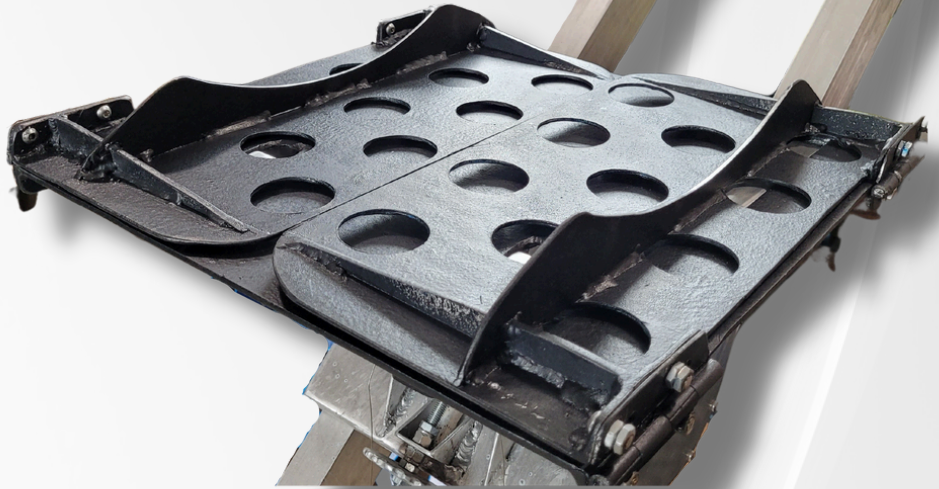

When not in use, the Stretcher Attachment folds up into a compact unit, easily stored on board of aircrafts. Manufactured in Canada with high quality 6061 Aluminium framing and option to be powder coated for a long lasting protective finish.

Cargo Attachment

31

The Cargo Attachment was designed for moving goods to and from remote areas only accessible by small aircrafts. Made to fit the Wright Lift, and is secured into place on the seat mount. The Cargo Attachment folds up into a compact unit, easily stored on board of aircrafts

32

Request for Quote

For pricing, the below measurements and details will need to be provided. We are happy to work with you on a standard or custom application. Once your request has been submitted, you will be contacted with an estimate to begin work.

1. Type of Aircraft
2. Height from floor, to base of aircraft door
3. Clearance from base of aircraft door to floor
4. Angle of incline
5. Height and width of aircraft door
6. Rise from the floor of the aircraft to the top of the aircraft door's threshold (if applicable)
7. Distance from the aircraft door to the seat
8. Height of front of seat cushion from floor of aircraft
9. Height of back of seat cushion from floor of aircraft
10. Width of aisle (if applicable)

Please include the above responses in your request for quote, by emailing p51dbw@gmail.com or calling 1-250-701-1716
